FIGURE S3. Linearity of income effect

ACDE and ANIE (assuming no treatment-mediator interaction) by measuring and randomizing a wide set of potential Z thereby making the sequential unconfoundedness assumption plausible in our setting.

FIGURE S4. Directed Acyclic Graph of Identifying Assumption for Controlled Direct Effects

no significant effect moderation by power perceptions for co-determination and management elections thereby allowing us to estimate the ANIE for those treatments. We do find some evidence of effect modification for ESOPs and account for this in our estimates of the ANIE by re-centering as suggested by (Acharya et al. 2016).

FIGURE S6. Effect of unionization by partisanship.

Notes: Estimates for the treatment effect for each trial where the comparison is between union vs non-union workplaces are ranked by magnitude and generated via causal forests. The thin vertical line represent the estimated causal effect of each treatment with the vertical shaded regions representing the 95% confidence interval. The horizontal shaded regions represent 95% confidence intervals of individual level treatment effect estimates.

Study 1: Objective Class Moderates Support for Workplace Democracy

Workplace democracy preferences might vary by objective class position. We show this variation across occupation, education, and income. We present the plots in the Appendix to save space. Figure S8 shows that blue-collar workers prefer to work at democratic workplaces more than white-collar workers. Additionally, blue-collar workers were more likely to believe that democratic workplaces would empower workers more. Blue and white-collar workers similarly believed that democratized workplaces came with more workplace responsibilities and that they would better solve workplace complaints. These effects were not statistically significant, but they were in the right theoretical direction.

More highly educated workers seem to prefer workplace democracy. Figures S10 and S9 show that more highly educated workers tend to prefer to work at democratized workplaces. They also seem to believe that democratized workplaces will empower workers and better handle complaints while still recognizing that these workplaces will place more responsibilities on workers. However, most of these effects are not statistically significant.

Higher-income respondents generally opposed democratizing workplaces. Figure S11 shows that higher-paid workers strongly oppose working at firms with codetermination and manager elections compared to lower-paid workers, however, higher-paid workers are just as likely to prefer working for firms using ESOPs as lower-paid workers. Interestingly, they were not more likely to believe that democratizing the workplace would empower workers more. Additionally, they were not more likely to think that democratizing the workplace would lead to firms burdening workers with responsibilities or would better handle workplace complaints. All of the results, besides firm preference, were not statistically significant. In sum, we found that objective class seemed to moderate preferences for workplace democracy.

Regression results for Figure S10 are reported in Tables S65 to S88. Regression results for Figure S11 are reported in Tables S89 to S112. Regression results for Figure S12 are reported in Tables S113 to S124. Regression results for Figure S13 are reported in Tables S125 to S134. Regression results for Figure S14 are reported in Tables S135 to S146.

Study 1: Additional Results

FIGURE S8. Interaction effect of different workplace regimes by industry.

FIGURE S9. Interaction effect of different workplace regimes by college education.

Notes: Estimates for the treatment effect for each trial where the comparison is against private ownership by non-worker shareholders are ranked by magnitude and generated via causal forests. The thin vertical line represent the estimated causal effect of each treatment with the vertical shaded regions representing the 95% confidence interval. The horizontal shaded regions represent 95% confidence intervals of individual level treatment effect estimates.

FIGURE S14. Main effects when subsetting to employed respondents and respondents looking for work.

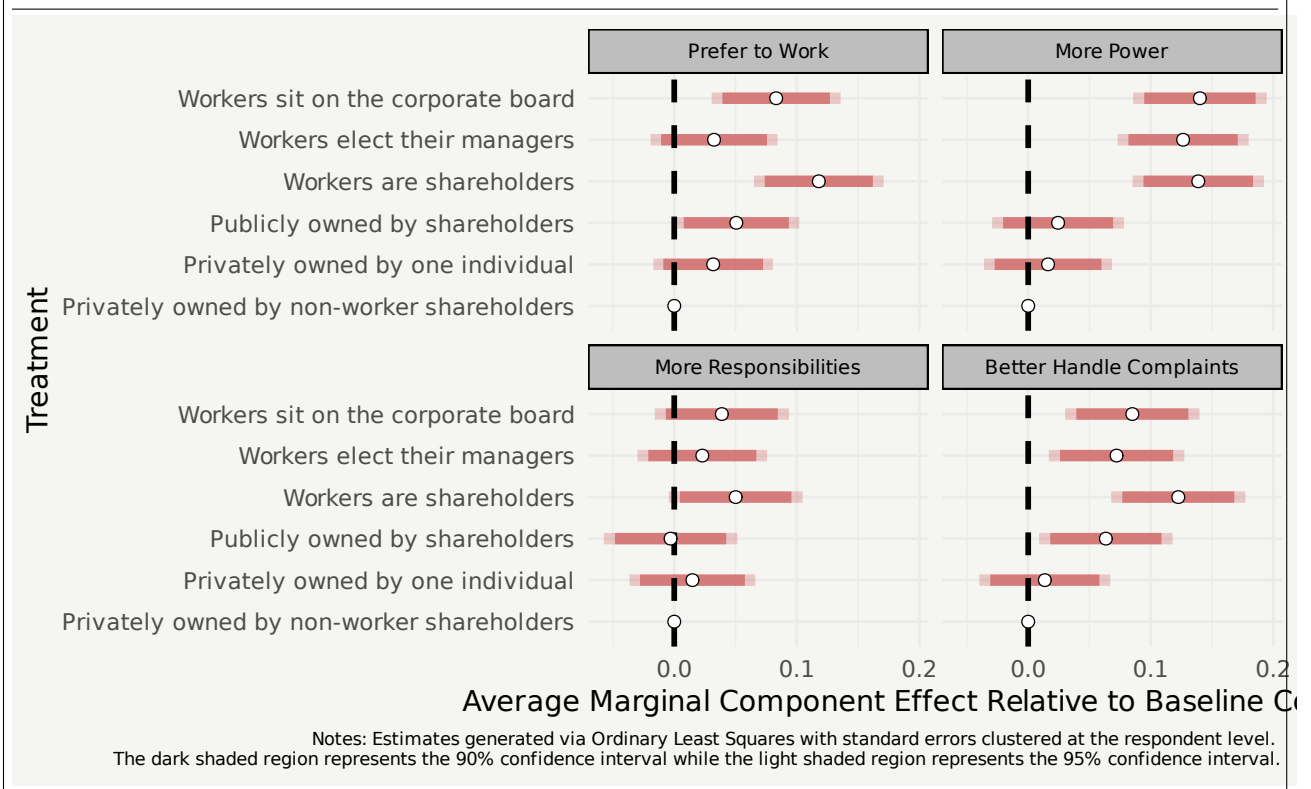

FIGURE S15. Effect of different workplace regimes.

Notes: Estimates for the treatment effect for each trial where the comparison is against private ownership by non-worker shareholders are ranked by magnitude and generated via causal forests. The thin vertical line represent the estimated causal effect of each treatment with the vertical shaded regions representing the 95% confidence interval. The horizontal shaded regions represent 95% confidence intervals of individual level treatment effect estimates.

policy issue.

Study 2: There is little evidence for heterogeneous policy framing effects across attitudinal moderators

We now investigate whether policy framing effects vary depending on the following moderators: support for democracy, position in the workplace hierarchy, working class identity strength, and social dominance orientation. We build on our original analysis by interacting each moderator with each treatment condition in one model. This model, though less parsimonious, guards against potential potentially statistically significant interactions that are a function of another interaction. We also tested whether working class identity moderated policy framing effects in another model by subsetting to only working class identifiers. We report all of these models in the Appendix in Table S5 and S6 in the interest of space.

We found little evidence suggesting that policy framing effects varied according to our moderators. For policy support, most of our interaction effects are close to zero with moderately sized standard errors. We find a similar pattern with respondents' work preferences. In short, policy framing effects show little variation conditional on moderators.

We found some evidence suggesting that policy framing effects vary depending on working class identity strength. The interaction effects suggest that strong working class identifiers may respond more positively to the benefit frame and are less affected by the cost frame, but the estimates are noisy. Future researchers will have to recruit larger samples to more carefully explore these moderators.

Study 2: Ethics

We did not handle direct recruitment or payment to survey respondents. We hired Lucid Theorem for \$1 per response.

Study 2: Experimental conditions

Codetermination

- **Control:** Codetermination is a policy where a company is required to have worker representatives on their board of directors. Workers at the company vote for their own representatives on the board. The worker representatives, alongside company shareholders, vote on how to run the company.
- **Benefit:** Codetermination is a policy where a company is required to have worker representatives on their board of directors. Workers at the company vote for their own representatives on the board. The worker representatives, alongside company shareholders, vote on how to run the company. Some say that giving workers a voice on corporate boards will make sure the company better reflects what workers want instead of only what executives and shareholders want.
- **Cost:** Codetermination is a policy where a company is required to have worker representatives on their board of directors. Workers at the company vote for their own representatives on the board. The worker representatives, alongside company shareholders, vote on how to run the company. Some say that giving workers seats on corporate boards would make running the firm less efficient because workers will have to spend more time thinking about how the firm runs in addition to their normal duties.
- **Both:** Codetermination is a policy where a company is required to have worker representatives on their board of directors. Workers at the company vote for their own representatives on the board. The worker representatives, alongside company shareholders, vote on how to run the company. Some say that giving workers seats on corporate boards would make running the firm less efficient because workers will have to spend more time thinking about how the firm runs in addition to their normal duties. Others say that

giving workers a voice on corporate boards will make sure the company better reflects what workers want instead of only what executives and shareholders want.

Manager elections

- **Control:** Manager elections is a policy where workers directly elect their managers. The managers then supervise the workers under them and make decisions about how to run the company. Managers have to win re-election from their workers just like representatives for political office.
- **Benefit:** Manager elections is a policy where workers directly elect their managers. The managers then supervise the workers under them and make decisions about how to run the company. Managers have to win re-election from their workers just like representatives for political office. Some say that allowing workers elect their own managers will make sure that companies are run the way that workers think is best.
- **Cost:** Manager elections is a policy where workers directly elect their managers. The managers then supervise the workers under them and make decisions about how to run the company. Managers have to win re-election from their workers just like representatives for political office. Some say allowing workers to elect their own managers might lead to less efficient companies because workers will have to think about managing the whole company instead of just focusing on their own work.
- **Both:** Manager elections is a policy where workers directly elect their managers. The managers then supervise the workers under them and make decisions about how to run the company. Managers have to win re-election from their workers just like representatives for political office. Some say allowing workers to elect their own managers might lead to less efficient companies because workers will have to think about managing the whole company instead of just focusing on their own work. Others say that allowing workers elect their own managers will make sure that companies are run the way that workers think is best.

ESOPs

- **Control:** Employee stock ownership plans (ESOPs) are a policy where workers can purchase stocks in the company in which they work. They can slowly accrue more stocks in the company the longer they stay at the company. The shares rarely provide workers voting rights that other types of stocks usually provided to other shareholders.
- **Benefit:** Employee stock ownership plans (ESOPs) are a policy where workers can purchase stocks in the company in which they work. They can slowly accrue more stocks in the company the longer they stay at the company. The shares rarely provide workers voting rights that other types of stocks usually provided to other shareholders. Some say that ESOPs ensure that companies listen to their workers because they have to listen to workers like how they listen to other shareholders.
- **Cost:** Employee stock ownership plans (ESOPs) are a policy where workers can purchase stocks in the company in which they work. They can slowly accrue more stocks in the company the longer they stay at the company. The shares rarely provide workers voting rights that other types of stocks usually provided to other shareholders. Some say that in order for ESOPs to be effective, workers have to spend time voicing their concerns to shareholders in addition to the work they do for the company.
- **Both:** Employee stock ownership plans (ESOPs) are a policy where workers can purchase stocks in the company in which they work. They can slowly accrue more stocks in the company the longer they stay at the company. The shares rarely provide workers voting rights that other types of stocks usually provided to other shareholders. Some say that in order for ESOPs to be effective, workers have to spend time voicing their concerns to shareholders in addition to the work they do for the company. Others say that ESOPs ensure that companies listen to their workers because they have to listen to workers like how they listen to other shareholders.

Fracking ban

- **Control:** A federal ban on fracking would prohibit oil-and-gas companies from fracking on both private

and public lands. Fracking is when companies shoot water into the ground to break apart rock to extract gas and oil. A ban would stop current and future fracking.

- **Benefit:** A federal ban on fracking would prohibit oil-and-gas companies from fracking on both private and public lands. Fracking is when companies shoot water into the ground to break apart rock to extract gas and oil. A ban would stop current and future fracking. Some say that the federal ban would help reduce the severity of climate crisis by moving the country away from fossil fuels.
- **Cost:** A federal ban on fracking would prohibit oil-and-gas companies from fracking on both private and public lands. Fracking is when companies shoot water into the ground to break apart rock to extract gas and oil. A ban would stop current and future fracking. Some say that the federal ban would increase the price of oil and gas because of reduced production.
- **Both:** A federal ban on fracking would prohibit oil-and-gas companies from fracking on both private and public lands. Fracking is when companies shoot water into the ground to break apart rock to extract gas and oil. A ban would stop current and future fracking. Some say that the federal ban would increase the price of oil and gas because of reduced production. Others say that the federal ban would help reduce the severity of climate crisis by moving the country away from fossil fuels.

Parental leave

- **Control:** A four-week paid-leave policy would provide new mothers with four weeks of paid leave from their jobs. It would also provide anyone who must perform caregiving duties for a loved one four weeks of paid leave.
- **Benefit:** A four-week paid-leave policy would provide new mothers with four weeks of paid leave from their jobs. It would also provide anyone who must perform caregiving duties for a loved one four weeks of paid leave. Some say that the paid leave would provide much needed flexibility to workers who need to recover from having children or take care of loved ones.
- **Cost:** A four-week paid-leave policy would provide new mothers with four weeks of paid leave from their jobs. It would also provide anyone who must perform caregiving duties for a loved one four weeks of paid leave. Some say that the paid leave would place a burden on employers and coworkers because work would have to be reallocated to the remaining employees.
- **Both:** A four-week paid-leave policy would provide new mothers with four weeks of paid leave from their jobs. It would also provide anyone who must perform caregiving duties for a loved one four weeks of paid leave. Some say that the paid leave would place a burden on employers and coworkers because work would have to be reallocated to the remaining employees. Others say that the paid leave would provide much needed flexibility to workers who need to recover from having children or take care of loved ones.

Study 2: Measures

Support is measured using a seven-point scale from “strongly support” to “strongly oppose.” Below is the wording for each policy:

- **Codetermination:** Would you support or oppose a government policy requiring codetermination at large companies?
- **Manager elections:** Would you support or oppose a government policy requiring manager elections at large companies?
- **ESOPs:** Would you support or oppose a government policy requiring ESOPs at large companies?
- **Fracking ban:** Would you support or oppose a federal ban on fracking?
- **Parental leave:** Would you support or oppose a four weeks paid-leave policy?

Work is measured using a seven-point scale from “Very likely” to “Very unlikely.” Below is the wording for each policy:

- Codetermination: How likely or unlikely are you to want to work at a company that had codetermination?
- Manager elections: How likely or unlikely are you to want to work at a company that had manager elections?
- ESOPs: How likely or unlikely are you to want to work at a company that had ESOPs?
- Parental leave: How likely or unlikely are you to want to work at a company that had a four weeks paid-leave policy?

Power is measured using a seven-point scale from “much more power” to “much less power.” Below is the wording for each policy:

- Codetermination: Do you think workers will have more or less power over how the company is run in firms with codetermination?
- Manager elections: Do you think workers will have more or less power over how the company is run in firms with manager elections?
- ESOPs: Do you think workers will have more or less power over how the company is run in firms with ESOPs?

Responsibility is measured using a seven-point scale from “much more time” to “much less time.” Below is the wording for each policy:

- Codetermination: Do you think workers will have to spend more or less time thinking about management decisions (e.g., what other workers should do, how best to spend companies’ funds, future of companies, etc.) in companies with codetermination?
- Manager elections: Do you think workers will have to spend more or less time thinking about management decisions (e.g., what other workers should do, how best to spend companies’ funds, future of companies, etc.) companies with manager elections?
- ESOPs: Do you think workers will have to spend more or less time thinking about management decisions (e.g., what other workers should do, how best to spend companies’ funds, future of companies, etc.) companies with ESOPs?

Cost is measured using a five-point scale from “a great deal” to “nothing at all.” Below is the wording for each policy:

- Fracking ban: Do you think the ban on fracking would personally cost you a great deal or nothing at all?
- Parental leave: Do you think a four-week paid-leave policy would personally cost you a great deal or nothing at all?

Benefit is measured using a five-point scale from “a great deal” to “nothing at all.” Below is the wording for each policy:

- Fracking ban: Do you think the ban on fracking would personally benefit you a great deal or none at all?
- Parental leave: Do you think a four-week paid-leave policy would personally benefit you a great deal or none at all?

We measured social dominance orientation with four items on seven-point scales from “strongly disagree” to “strongly agree.” They are:

- In setting priorities, we must consider all groups.
- We should not push for group equality.
- Group equality should be our ideal.
- Superior groups should dominate inferior groups.

We measured support for democracy using five items on seven-point scales from “strongly agree” to “strongly disagree.” They are:

- Having a strong leader who does not have to bother with Congress and elections

- Having experts, not elected officials, make decisions according to what they think is best for the country
- Having the army rule
- Electing representatives to make policies
- Having a democratic political system

We measure racial resentment using two items on five-point scales from “strongly agree” to “strongly disagree.” Note that we deviated from our pre-analysis plan because the survey was longer than we expected during pre-testing. They are:

- Irish, Italians, Jewish and many other minorities overcame prejudice and worked their way up. Blacks should do the same without any special favors.
- Generations of slavery and discrimination have created conditions that make it difficult for blacks to work their way out of the lower class.

We measure class identity by asking:

- Which social class do you identify with?
 - Lower class
 - Working class
 - Middle class
 - Upper class

We measure class identity strength with two questions on seven-point scales. Note that we deviated from our pre-analysis plan because the survey was longer than we expected during pre-testing. They are:

- When talking about the [respondent class], I usually use “they” instead of “we.”
- Being [respondent class] is important to me.

We measured place in the workplace using the following items:

- Which of the following best describes the position which you hold within your business or organization? Would it be a managerial position, a supervisory position, or a non-management position
 - Managerial
 - Supervisory
 - Non-management/Non-supervisory
- If they choose “Managerial”: Would that be a top, upper, middle, or lower managerial position?
 - Lower
 - Middle
 - Upper
 - Top
- The next question concerns policymaking at your workplace; that is, making decisions about such things as the products or services delivered, the total number of people employed, budgets, and so forth. Do you participate in making these kinds of decisions, or even provide advice about them?
 - Yes
 - No
- As an official part of your main job, do you supervise the work of other employees or tell other employees what work to do?
 - Yes
 - No

We measure union membership by asking:

- Are you a member of a labor union?
 - Yes, I am a member of a labor union
 - No, but I was a member of a labor union
 - No, and I have never been a member of a labor union

We measure ideology using the standard seven-point scale from “very liberal” to “very conservative.”

We received the following covariates from Lucid: ethnicity, Hispanic, age, education, household income, and party identification.

Study 2: Policy knowledge wording

We asked the following questions to assess whether respondents understood the policies. These questions were also written to ensure that one would need to read carefully to correctly answer the questions. We also randomized the order of the answers.

Codetermination: Which statement best describes codetermination?

- Codetermination is where workers directly elect their managers
- Codetermination is where workers elect representatives to sit on the corporate board
- Codetermination is where workers and managers collectively decide how to run the company
- Codetermination is where workers become shareholders of their firm

Manager elections: Which statement best describes manager elections?

- Correct: Manager elections are where workers vote for their managers
- Manager elections are where workers vote for a representative on a corporate board
- Manager elections are where workers become shareholders of the firm
- Manager elections are where workers vote on their companies’ policies

ESOPs: Which statement best describes employee stock ownership plans (ESOPs)?

- Correct: ESOPs are where workers accrue stock in the companies they work for
- ESOPs are where workers can vote for their managers
- ESOPs are where workers can vote for a worker representative on the corporate board
- ESOPs are where workers can become members of the corporate board

Fracking ban: Which statement best describes a ban on fracking?

- A ban on fracking would prohibit all oil drilling on federal and private lands
- Correct: A ban on fracking would prohibit shooting water into the ground to extract oil and gas
- A ban on fracking would prohibit drilling in the Alaskan wilderness
- A ban on fracking would close extracting oil and gas from the Gulf of Mexico

Parental leave policy: Which statement best describes the four-week paid-leave policy?

- Workers would have four weeks of paid leave for new motherhood or caring for a loved one
- Correct: Workers would have four weeks of paid leave for only caring for a loved one
- Workers would have four weeks of paid leave for any reason whatsoever
- Workers would have four weeks of paid leave for mothers and fathers

Study 2: Results using standardized outcome measures

The following results use outcome measures that we mean-centered and divided by their standard deviations. Therefore, the coefficients represent standard deviation changes.

TABLE S162. Policy framing effects on support for workplace democracy - Standardized measure

	Workplace policies	Support		
		Codetermination	Elections	ESOPs
Benefit	0.058* (0.034)	0.116* (0.060)	0.089 (0.061)	-0.030 (0.061)
Cost	-0.096*** (0.035)	-0.081 (0.060)	-0.104* (0.061)	-0.105* (0.060)

Education	0.062** (0.028)	0.004 (0.023)
Constant	0.898*** (0.034)	1.107*** (0.029)
N	2,138	2,138
R ²	0.330	0.194
Adjusted R ²	0.327	0.189

*p < .1; **p < .05; ***p < .01

Notes: Cluster-robust standard errors at the respondent level are in the parentheses.

We fielded the survey on Lucid from January 19th to February 11th, 2022.

Study 2: Results using ordinal logistic regression

Tables S170 to S173 match Tables S174 to S177 but use logistic regression. We prefer the OLS estimates in the main text because they are easily interpretable and transparent, however, we also want to provide these results for readers who prefer different modeling strategies.

TABLE S170. Policy framing effects on support for workplace democracy - Ordinal logistic regression

	Workplace policies	Support		
		Codetermination	Elections	ESOPs
Benefit	0.129** (0.063)	0.257** (0.109)	0.165 (0.109)	-0.048 (0.109)
Cost	-0.183*** (0.061)	-0.156 (0.105)	-0.195* (0.108)	-0.202* (0.106)
Cost and benefit	-0.117* (0.063)	-0.077 (0.109)	-0.035 (0.108)	-0.254** (0.110)
N	6,414	2,138	2,138	2,138

* $p < .1$; ** $p < .05$; *** $p < .01$

Notes: Cluster-robust standard errors at the respondent level are in the parentheses.

We include policy-level fixed effects but do not show them to preserve space.

We fielded the survey on Lucid from January 19th to February 11th, 2022.

TABLE S171. Policy framing effects on work preferences for workplace democracy - Ordinal logistic regression

	Workplace policies	Work		
		Codetermination	Elections	ESOPs
Benefit	0.100 (0.062)	0.088 (0.105)	0.200* (0.110)	-0.009 (0.107)
Cost	-0.195*** (0.063)	-0.291*** (0.108)	-0.126 (0.109)	-0.180* (0.108)
Cost and benefit	-0.088 (0.063)	-0.153 (0.109)	-0.076 (0.108)	-0.035 (0.110)
N	6,414	2,138	2,138	2,138

* $p < .1$; ** $p < .05$; *** $p < .01$

Notes: Cluster-robust standard errors at the respondent level are in the parentheses.

We include policy-level fixed effects but do not show them to preserve space.

We fielded the survey on Lucid from January 19th to February 11th, 2022.

TABLE S172. Policy framing effects on perceptions of worker power in workplace democracy - Ordinal logistic regression

	Workplace policies	Power		
		Codetermination	Elections	ESOPs
Benefit	0.187*** (0.061)	0.030 (0.110)	0.201* (0.107)	0.357*** (0.110)
Cost	-0.024 (0.064)	-0.072 (0.110)	-0.120 (0.111)	0.132 (0.120)
Cost and benefit	0.016 (0.062)	-0.145 (0.109)	-0.169 (0.107)	0.400*** (0.112)
N	6,414	2,138	2,138	2,138

*p < .1; **p < .05; ***p < .01

Notes: Cluster-robust standard errors at the respondent level are in the parentheses.

We include policy-level fixed effects but do not show them to preserve space.

We fielded the survey on Lucid from January 19th to February 11th, 2022.

TABLE S173. Policy framing effects on perceptions of worker responsibilities in workplace democracy - Ordinal logistic regression

	Workplace policies	Responsibility		
		Codetermination	Elections	ESOPs
Benefit	0.093 (0.063)	0.016 (0.112)	-0.034 (0.108)	0.324*** (0.113)
Cost	0.165*** (0.063)	-0.005 (0.110)	0.170 (0.109)	0.361*** (0.111)
Cost and benefit	0.036 (0.065)	-0.255** (0.112)	-0.029 (0.112)	0.430*** (0.115)
N	6,414	2,138	2,138	2,138

*p < .1; **p < .05; ***p < .01

Notes: Cluster-robust standard errors at the respondent level are in the parentheses.

We include policy-level fixed effects but do not show them to preserve space.

We fielded the survey on Lucid from January 19th to February 11th, 2022.

Study 2: Table versions of plots

TABLE S174. Policy framing effects on support for workplace democracy - Unstandardized measure

	Workplace policies	Support
